Below is a concise **step-by-step guide** that walks you through setting up and using your Streamlit-based Face Recognition Security System in VS Code.

### Prerequisites

- **Windows 10/11 (64-bit)**, or macOS/Linux with minor path tweaks
- **Python 3.13.3** installed and added to your PATH
- **Webcam** (built-in or USB)
- **VS Code** with the **Python** extension installed

### Project Structure

Project/

```
|— app.py           # Main Streamlit application
|— requirements.txt # Python dependencies
|— yolov8n-face.pt  # YOLOv8 face-detection weights
|— face_database.pkl # (auto-created) face encodings database
```

### Setup in VS Code

#### 1. Open the Project

In VS Code: **File** → **Open Folder...** → select your Project folder.

#### 2. Create & Activate Virtual Environment

- Open the integrated terminal: **Terminal** → **New Terminal**

**Create an env named “venv”:** `python -m venv venv`

**Activate it:** `.\venv\Scripts\Activate`

### Very important step:

After you have created your environment run the following command:

*pip install*

[https://github.com/omwaman1/dlib/releases/download/dlib/dlib-19.24.99-cp313-cp313-win\\_amd64.whl](https://github.com/omwaman1/dlib/releases/download/dlib/dlib-19.24.99-cp313-cp313-win_amd64.whl)

Just copy paste in your vs code terminal, it will download and install dlib.

### **Install other Dependencies:**

pip install -r requirements.txt

### **Running the App**

In the activated env, run: *streamlit run [app.py](#)*

- Your browser will open at <http://localhost:8501/>.
- If it doesn't open automatically, copy-paste that URL into your browser.

### **How to Use the System**

#### **Authentication Methods**

##### **Face Recognition**

1. Select **Authenticate** mode in the sidebar.
2. Click **Start Authentication**.
3. Follow on-screen instructions:
  - Face straight into camera
  - Hold still
4. On success, access is granted and the home panel appears.

##### **PIN Access**

1. Select **PIN Access** mode.
2. Enter the 6-digit PIN.
3. Click **Authenticate with PIN**.
4. On correct PIN, access is granted.

##### **RFID Access:** Demo mode

## Face Registration (Admin Only)

1. Select **Register Face (Admin Only)**.
2. Enter **Admin Password**.
3. Provide a **username** for registration.
4. Click **Start Face Scan** and follow lighting and framing instructions.
5. On completion, the new face encoding is saved to the database.

## Home Control Panel

### Overview

After authentication, the main panel displays:

- **Uptime, Battery Backup Status, System Faults** metrics
- **Simulation/Real Mode** indicator

### Appliance Controls

- **Living Room Lights** toggle
- **Alarm System** toggle
- **Smart TV** toggle

State changes trigger real or simulated actions, logged automatically.

### Status Display

- Visual indicators for each appliance (ON/OFF, ARMED/DISARMED)
- **Access Logs** — latest 10 events shown in a table
- **Active Alerts** — unacknowledged warnings and critical notifications
- **Logout** button to end the session

### Admin Tools (Sidebar)

**Simulation Mode Toggle:** Switch between **Simulation Mode** and **Real Device Mode** for appliance controls.

### System Simulation Controls

- **Simulate Power Outage:** Activates battery backup and disables non-essential devices.
- **Restore Power:** Returns to main power, re-enables devices.
- **Trigger Self-Healing:** Resets fault counters and attempts recovery.

### Database Management

- **Clear Database:** Deletes all registered faces (admin password required).
- **Export Access Logs:** Download complete log as CSV.

### Logging & Alerts

- **Access Logs:** Stored in access\_log.csv, record all authentication and control events.
- **Alerts:** Real-time toasts and alert panel entries with levels:
  - **info** (system updates)
  - **warning** (non-critical issues)
  - **critical** (security breach or faults)
- **Acknowledgement:** Alerts remain active until manually acknowledged in the panel.

### Self-Healing & Fault Tolerance

- **Automatic camera fault detection** triggers self-healing after 3 consecutive failures.
- **Battery backup simulation** provides up to 5 minutes of operation on main power failure.
- **Self-Healing** restores battery mode and clears fault counters.

### Troubleshooting

Symptom	Fix
No camera detected	Close other apps using the webcam; ensure webcam drivers are installed
dlib installation errors	Make sure your python version is python 3.13.3 and while after creating the environment in vs code run:

	<p>pip install</p> <p><a href="https://github.com/omwaman1/dlib/releases/download/dlib/dlib-19.24.99-cp313-cp313-win_amd64.whl">https://github.com/omwaman1/dlib/releases/download/dlib/dlib-19.24.99-cp313-cp313-win_amd64.whl</a></p>
<b>Pickle load/save errors</b>	Delete face_database.pkl and retry registration
<b>“Running scripts is disabled”</b>	Run Set-ExecutionPolicy RemoteSigned -Scope CurrentUser in PowerShell
<b>Poor face detection or low quality</b>	Improve lighting; remove glasses; ensure face is centered and not too small in frame
